

Some Annotation Examples for Full body classification with localization -

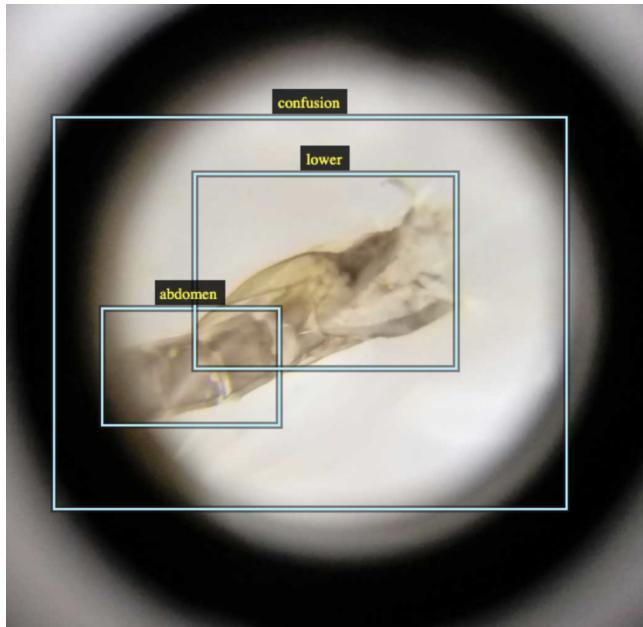

Here “lower” means - (Siphon + Saddle)

If we can't detect the image, we will assign a box with a comment. Then we can separate them with others and will observe those images again with expert help. (Examples below)

Confused with the body part

Confused with the species (Identified as an anopheles but it looks like having a siphon)

Is it a saddle or siphon? It has been identified as anopheles.
